

What is the Linux Command

To view what's written in a file
cat filename.txt

To change the access permissions of files, for instance, to make the file executable, you can use the chmod command as follows:

chmod 700 filename.txt

To check which commands you've run till now
history

To remove a file
rm filename.txt

To remove a directory
rm -r directoryname

To create a fruits.txt file and view its content
touch fruit.txt
cat fruit.txt

To add content to devops.txt (one item per line)
vi devops.txt

To show only the top three fruits from the file
cat devops.txt | head -3

To show only the bottom three fruits from the file
cat devops.txt | tail -3

To create another file Colors.txt and view its content
touch Colors.txt
cat Colors.txt

To find the difference between fruits.txt and Colors.txt file
diff fruits.txt Colors.txt
